

OBSERVATORY & PLANETARIUM

First Light is a space-discovery planetarium that brings James Webb’s images down to Earth. Deep-space colour, precise engineering data and a sense of wonder combine into an identity that feels cosmic, scientific and awe-inspiring.

Pillars of Creation
M16 · 6,500 ly · NIRCam

Cartwheel Galaxy
500 million ly · NIRCam + MIRI

Southern Ring Nebula
2,500 ly · MIRI

Stephan's Quintet
290 million ly · NIRCam + MIRI

COLOUR PALETTE · FROM WEBB'S IMAGES

TYPOGRAPHY

Unbounded Aa

Space Grotesk · body text
JetBrains Mono · 6.5 m · 1.5 M km

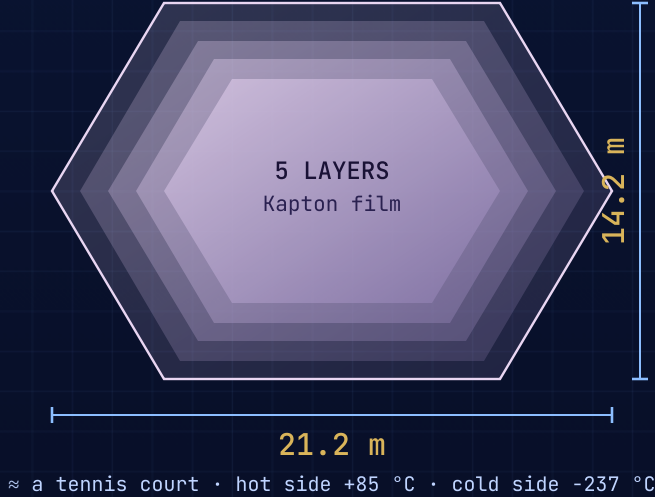

JWST · TECHNICAL SPEC SHEET

LAUNCH 25.12.2021 · ARIANE 5 · KOUROU

A · PRIMARY MIRROR (FRONT)

B · SUNSHIELD (TOP VIEW)

C · ORBIT AROUND SUN-EARTH L2 (NOT TO SCALE)

6.5 m

PRIMARY MIRROR
largest ever flown in space

25.4 m²

COLLECTING AREA
≈ 6× Hubble's mirror

1.5 M km

FROM EARTH
≈ 4× the distance to the Moon

0.6–28.5 μm

INFRARED RANGE
sees through cosmic dust

-233 °C

MIRROR TEMPERATURE
just 40 K above absolute zero

6.2 t

LAUNCH MASS
folded origami-style to fit

EMOJI

Curiosity: the reason I look up at the night sky.

BRAND WORDS

Cosmic Precise Curious Awe-inspiring Luminous Timeless

Pair dark, deep-space backgrounds with warm nebula light. Show real data as design. Measurements are part of the beauty.
